

Signalling Tower ML70

- ▶ Combinations of up to 5 modules possible
- ▶ Modules available in steady light, flashing light or acoustic
- ▶ Optical-acoustical Combi modules available
- ▶ Housing polycarbonate
- ▶ 6 lens colours
- ▶ Piezo sounder modules up to 107 dB(A)
- ▶ Sounder with 15 tone types
- ▶ 3 mounting possibilities: horizontal, vertical or on tube
- ▶ Light modules for bulbs and LED bulbs
- ▶ Protection degree IP 65
- ▶ NEMA type 4, 4X, 13

Application

Thanks to the extensive range of modules and accessories, the signalling tower can be used in almost all fields where clear identification of, for example, machine statuses is vital. The protective housings of the light elements even enable the post to be used in damp rooms or outside. The signalling tower is assembled with simple catches with integrated contact system. All that is necessary for a firm post connection is to place the module on top of the tower and turn the ring slightly. The modules can be combined into a complete signalling tower with various signalling elements. The electric connection between terminal unit and the individual modules is established automatically by the internal contacts. The choice of elements ranges from continuous, flash and blinking light elements to acoustic elements.
